Risk Based Vulnerability Management as-a-Service

Your security starts with the complete and continuous visibility of your modern attack surface. How do you understand and strengthen your vulnerabilities?

How vulnerable is your business?

Cirrus Risk-Based Vulnerability Management as-a-Service (RBVMaaS) will help you enable the discovery of all your business assets, assessment and prioritisation of vulnerabilities that reduce the strength of your security posture. By using our team of security professionals, who understand the current threat landscape and offensive techniques of attackers, Cirrus will partner with you ensuring a strong security posture is achieved starting with our 5 easy steps.

FIVE WAYS TO STRENGTHEN YOUR SECURITY POSTURE WITH CIRRUS

1. Get industry-leading advice with Cirrus.
2. Deploy best of breed tools and maintain effeciently.
3. Understand the attack surface.
4. Customise your reporting and provide accurate information to stakeholders, and;
5. Regulate compliance requirements like Essential 8, ISO 27001, PCI and more.

SECURITY DOESN'T HAVE TO BE DIFFICULT TO ACHIEVE BEST OF PRACTICE OUTCOMES

By partnering with Cirrus we have tailor made your experience to be pain free. Cirrus provides the people, the process and technology to increase your cyber hygiene requirements.

What are the benefits of a vulnerability management service?

Asset identification
Complete visibility of assets on the network.

Asset profiling
Assets profiled by function, services, environment, lifecycle and more.

Flexibility and scalability
Services tailored to your organisation's specific needs.

Program management
Fully managed end-to-end vulnerability management program development and administration.

Risk-based remediation
Vulnerability patching and remediation efforts prioritisation by customer-specific risk-based scoring.

Remediation guidance
Assistance for infrastructure, application, or business owners for remediation of vulnerabilities and prioritisation.

> Security vulnerabilities are increasingly being discovered and exploited. In any type of business, the number is often overwhelming, lacking visibility across networks and leaving your vulnerabilities unknown.

Lindon Edwards
Principle Security Architect – Cirrus

How does Cirrus RBVMaaS compare to others?

DESCRIPTION	DIY	TYPICAL SERVICE PROVIDER	CIRRUS SERVICE
Recruiting, retaining and dedicating knowledgeable IT security staff to manage and analyse scans.	Required	Not Required	Not Required
Sourcing, set-up, platform maintenance.	⊘	⊘	⊘

Ad hoc scanning.	⊘	Extra Cost	⊘
Ongoing vulnerability prioritisation is contextual to evolving business risk profiles.		Extra Cost	⊘
Scan accuracy verification and continuous optimisation accounting for changing IT environment.		Extra Cost	⊘
Ongoing threat intelligence communications on emerging vulnerabilities.		Extra Cost	⊘

ⓘ Cirrus flexible service-level options are available that enable full or partial management.

Why Cirrus

Cirrus has continuously provided Industry leading Vulnerability Management advisory services and completed the most complex deployments to our valued customers.

Qualified security cleared staff work with your organisation to understand risks and prioritise remediation activities. Our unique approach to Risk-Based vulnerability management has accelerated organisations to increase the strength of their security posture, understanding that Vulnerability management extends beyond the toolset and into the business.

Meeting with your team to build consensus on how vulnerabilities will be identified, prioritised, remediated and measured, Cirrus provides clearly defined metrics and continually identify current risks and overall program maturity and efficacy.

Meeting your security needs

With a growing National business, Cirrus has 100+ trained engineers with strong competencies in the security sector to give you the best possible outcome for your business budgets.
