KEEPING UP WITH
I.T. DEMANDS

Businesses need a secure, flexible and scalable solution to deliver on their digital transformation strategy. The Information and communication technologies (ICT) industry has created Secure Access Service Edge (SASE) to address these needs over traditional data centre-centric solutions.

Applications are now hosted in multiple locations and are viewed and accessed by home and office users in various ways across a variety of connectivity technologies. The Wide Area Network (WAN) can no longer be just a pipe that connects branch offices and data centres, requirements have evolved from a centrally managed systems into a distributed ecosystem reliant on the Internet and public cloud networks using a Software Defined Wide Area Network (SD-WAN).

WHAT ARE THE BENEFITS OF A SASE SERVICE

Empower your organisation with secure, flexible, and scalable connectivity. Take away complexities of managing multiple security and networking tools and embrace the benefits of a Managed Service.

SECURITY EVERYWHERE

Protect your users and data with advanced threat detection, secure web gateways, firewall capabilities, policy-driven Secure Internet Gateway (SIG), Zero Trust authentication, application visibility and control capabilities integrated into a single platform.

FLEXIBLE DEPLOYMENT

SASE supports cloud-native and hybrid deployments, allowing you to transition to a cloud-centric network infrastructure.

APPLICATION OPTIMISATION

Improve application performance and reduce latency through application-aware routing and optimisation.

IDENTITY-CENTRIC SECURITY

Ensure secure access by verifying user identities and enforcing policies based on user attributes.

SIMPLIFIED MANAGEMENT

Manage your entire network and security stack from a centralised dashboard, making administration more accessible and efficient.

NATIONAL OPERATIONS CENTRE (NOC)

The Cirrus NOC supports and manages your SASE Service, including configuring, monitoring, managing, and reporting.

SERVICE DESK

Your I.T. Team can request an actionable service to report issues, with full observability of each ticket raised.

AUSTRALIAN LISTED COMPANY

Know that you are using an Australian public company that delivers services within Australia, conforming to Australian regulatory requirements around security, privacy, modern slavery and sustainability.

STAY SECURE
WHEREVER YOU WORK

Cirrus provides a single cloud-based network that connects and secures any physical, cloud or mobile resource in any location using 5 key components.

UNIFIED SECURITY & NETWORKING

The SASE service combines network security and wide-area networking (WAN) capabilities into a single, cloud-delivered service, simplifying your infrastructure and reducing complexity.

GLOBAL REACH

With an extensive network of secure data centres and points of presence, Cirrus offers the right tools to ensure fast, reliable, and secure access to your applications and data from anywhere in the world.

ENHANCED USER EXPERIENCE

Enhance user experience by providing a robust and reliable network connection to applications and resources to boost productivity and satisfaction.

SCALABILITY

Easily scale your network and security services up or down based on your organisation's changing needs while benefiting from industry leading tools.

ZERO TRUST SECURITY

Implement a zero-trust security model to protect your organisation from threats, regardless of the user location.
